Shipping AI products end to end, from infrastructure to UI

Staff-level full-stack and AI engineer with 10 years shipping AI products in production across language, voice, vision, and robotics. Most recently tech lead for an LLM voice agent platform handling ~50k calls a day, owning infrastructure, backend, frontend, and evals. Two-time founder who works directly with customers to turn fuzzy problems into products.

Experience

Staff AI Engineer, Tech Lead *Hiya* — 05/2025 - 05/2026

LLM Voice Agents **For businesses · ~50k production calls/day**

- Tech lead for a platform of LLM voice agents making and answering calls for businesses; owned technical direction end to end across infrastructure, backend, and frontend, met with customers, and shaped product vision
- Built the evaluation system from scratch: hundreds of simulated call scenarios and assertions per agent, graded by LLM judges and run daily across every agent to catch regressions before they shipped
- Shipped a post-call monitor that graded live production calls with the same judges, surfacing failures for human review at a scale no team could cover by hand
- Instrumented the agent harness to catch faulty tool calls, such as failing to transfer a caller to a human when required
- Built a human review UI and failure taxonomy so the team could label, triage, and prioritize agent fixes

Cofounder, CTO *Of Counsel AI* — 07/2023 - 09/2024

Legal AI **Copilot**

- Built the product from zero as technical cofounder: a legal copilot integrating chat, document editing, and UI actions on a real-time collaborative editor (CRDTs)
- Architected a production RAG system combining graph databases and LLMs for legal drafting and analysis
- Built an agent system with distributed workflow execution for multi-step document processing, increasing batch speed 80%
- Built an LLM evaluation framework with custom datasets, enabling data-driven model selection and a 25% quality improvement
- Selected for Madrona Venture Labs' Launchable startup competition

Founder *Weaver.fm* — 09/2022 - 04/2023

Social Audio App

- Designed and built a social audio app solo, from backend to client
- Shipped LLM-generated conversation prompts as a core feature, tripling average conversation length
- Built a custom ASR pipeline combining Whisper with forced alignment, reducing transcription errors 40%

SDE, Robotics Simulation *Amazon Scout* — 07/2020 - 08/2022

Autonomous Delivery **Sidewalk delivery robots**

- Built a multimodal autoencoder and clustering system to identify and classify incidents, discovering new robot failure modes
- Led development of a GPU-accelerated cloud simulation platform running 5,000+ photorealistic, physics-based tests daily against new robot software versions
- Built a pipeline generating 1M+ synthetic sensor training samples monthly for navigation and perception models
- Raised GPU utilization 25% and cut job queue times 50% through multi-region autoscaling
- Architected software distribution with rollback for 1,000+ physical robot deployments weekly

Machine Learning Engineer *AI Foundation* — 01/2019 - 02/2020

Generative AI **Avatars**

- Led training and deployment of ML models across the engineering organization, including a voice-cloning pipeline
- Built a semantic similarity service backed by embedding-model ablations, improving avatar response accuracy 30%
- Co-authored a paper on a faster-converging alternative to batch normalization (see Publication)

SDE, Machine Learning Services *Amazon* **08/2016 - 01/2019**

Alexa Shopping

- Founding engineer on the Alexa Shopping ML team; built language model infrastructure serving 40M+ monthly users
- Designed key components of data annotation and human-in-the-loop model evaluation tools
- Built distributed inference services with 99.99% uptime and 50 ms average latency across 10M+ daily requests
- Cut model deployment time from 2 weeks to 2 days with an automated pipeline

Education

- **B.S. Computer Science, Vanderbilt University** (2016) — minor in Engineering Management; coursework in AI, Machine Learning, Neuroscience
- **Machine Learning University at Amazon** — 12 six-week courses including Probabilistic Graphical Models, Deep Learning NLP, CNNs, RNNs, Transformers
- **UC Berkeley, Data Science Masters Program** (unfinished) — coursework in Statistics and Research Design

Publication

- *Mean Shift Rejection: Training Deep Neural Networks Without Minibatch Statistics or Normalization* (arXiv, 2019) — second author. Studied an alternative to batch normalization in ResNets; faster convergence with no loss in accuracy. Code on GitHub.

Skills

- **Languages:** Python, TypeScript, C++, Java, Scala, CUDA
- **AI & LLMs:** agents and tool use, RAG, LLM-as-judge evals, voice and ASR, embedding models, PyTorch
- **Full stack & infra:** real-time collaborative editing (CRDTs), Postgres, Neo4j, Temporal, Kafka, Docker, AWS, Google Cloud

Other

- **Independent consulting (2022 – 2025):** built AI prototypes for clients, including product listings generated from voice descriptions and an internal Slack Q&A agent
- **AECJ climate nonprofit (2020 – 2026):** board of directors, VP; led tech and recruiting
